Traditional Express Soil System with push-fit sockets saves time

New from Hargreaves Foundry comes the Traditional Express Soil System with push-fit sockets for ease of on-site installation. Manufactured in cast iron, the pipes and fittings are factory coated in a 2-pack gloss paint finish and are suitable for both internal and external applications.

All pipes are twice-finished in a yellow ochre internal coating. Push-fit sockets are fitted with 2 EPDM rubber sealing gaskets and are available in 3 versions: eared, plain and slip-eared. Pipes are available in 1.8m lengths to match appearance of BS416 Part 1. The system meets BSEN12056 for gravity drainage systems.

Hargreaves UK distribution operations and production are contained on one site and include patternmaking, foundry and fabrication facilities for bespoke commissions.

Good stocking levels enable the company to deliver complete orders on time as agreed.

Notes to editors:

Hargreaves Foundry was established before 1881, in Halifax, Yorkshire, and today employs a staff of 65. The iron founders have supplied castings to the engineering and construction industries for approximately 130 years. It is best known as a manufacturer of cast iron drainage products. However, Hargreaves Foundry has retained specialist pattern making and foundry skills and is now just one of a handful still operating in the UK.
